Continuous Plant AE Characterization - Comprehensive Report

Generated: 2026-06-22 16:43:04 **Experiment:** continuous_plant_ae_20260622 **Run ID:** 20260622_175202
Status: running **Runtime:** 51.0 minutes (0:51:01.907342)

Configuration

- **Sample Rate:** 25.0 MSa/s
- **Time Base:** 10.0 ms/div
- **Trigger:** EDGE on CHAN1

Frame Analysis

- **Total Frames:** 214
- **Frames with Events:** 0
- **Total Events:** 0

Event Analysis

- **Total Events:** 213

Event Types

- **spectral_change:** 209
- **light_phase_changed:** 1
- **experiment_started:** 1
- **oscilloscope_connected:** 1
- **psd_snapshot_saved:** 1

Spectral Changes

- **Total spectral change events:** 209
- **Total peak detections:** 3995

Detections per Channel

- **CH1:** 1120 detections
- **CH2:** 1527 detections
- **CH3:** 1348 detections

39 kHz Region Analysis

- **Detections in 38-40 kHz range:** 36
- **CH1:** 8 detections
- **CH2:** 18 detections
- **CH3:** 10 detections

Note: Recurring activity in the 39 kHz range has been observed, particularly on CH2 and CH3. This may indicate biological activity or environmental interference. Further investigation is needed.

Soil Moisture

- **Current:** 26.5%
- **Average:** 27.0%
- **Min:** 19.8%
- **Max:** 36.8%

Summary

The experiment has been running for 51.0 minutes and has characterized 214 frames. No acoustic events were detected so far. The average soil moisture is 27.0%.
